And has an integrated and modern fleet of world-class trucks of high efficiency and versatile trailers.

DMC focuses on the quality of the provided services, safety and insurance as a key element in its dealing with customers in Saudi Arabia.

OKO TYRE SEALANT

OKO was the original effective tyre sealant when launched in the UK in 1978, has always been made in the UK, and thanks to a programme of continuous development and range extension since then, it remains the best. It continues to be manufactured (with ISO 9001 and ISO 14001 certification for OKO's entire operation) from cutting-edge ingredients sourced from leading innovators in chemical development.

Imitation may be the sincerest form of flattery, and in the present day, there are many Tyre Sealant competitors to OKO. Viewing their websites and literature, many of their statistics, facts and statements stem from the original OKO data and web site.

HOW OKO WORKS

- OKO Puncture free is applied to the tyre via the valve stem.
- The motion of the revolving tyre causes the product to coat the inner surface of the tyre providing a main body of sealant protective, ready to seal any puncture.
- When the tyre is punctured, air pressure forces OKO puncture free into the hole and the tyre sealant compresses to form a strong permanent airtight seal.
- The sealing action is virtually instantaneous and minimal air pressure is lost
